

Approved For Release 2003/01/28 : CIA-RDP78B04770A002600100004-0
MEMORANDUM FOR: [REDACTED]

25X1

I have tried DF 4 and it
accepts ball point pens & other marking
systems well. Presently, the [REDACTED]
is using Post Polytex 126-3, a similar
material and either a ball point pen or a
Rapidograph pen. However, I would like to contact
these people for further info. 30 Dec.

JOHN P. 

I forward this in light of our
problem with pens for the photo -

memo

Thank you for your good letter of July 221 1966. It was forwarded to me from [redacted] Had your letter reached me in April, I am sure that we could have come to terms. Getting acquainted with my new duties has delayed my answering your letter.

While employed by [redacted] as a photogrammetrist, I was offered the present position I now have with [redacted] I joined [redacted] in late June. [redacted] expressed very nearly the same thoughts which you expressed in your letter. --- "There is, therefore, both room and need for imagination and original thinking to spring from a sound base of academic training and experience. There is rewarding satisfaction to the alert and aggressive intellect." In addition to photogrammetry, I am involved in research and development here at [redacted]

Enclosed is a portion of a blue line copy of a recently compiled manuscript. I compiled this manuscript on DuPont DF-4 using ball point pens.

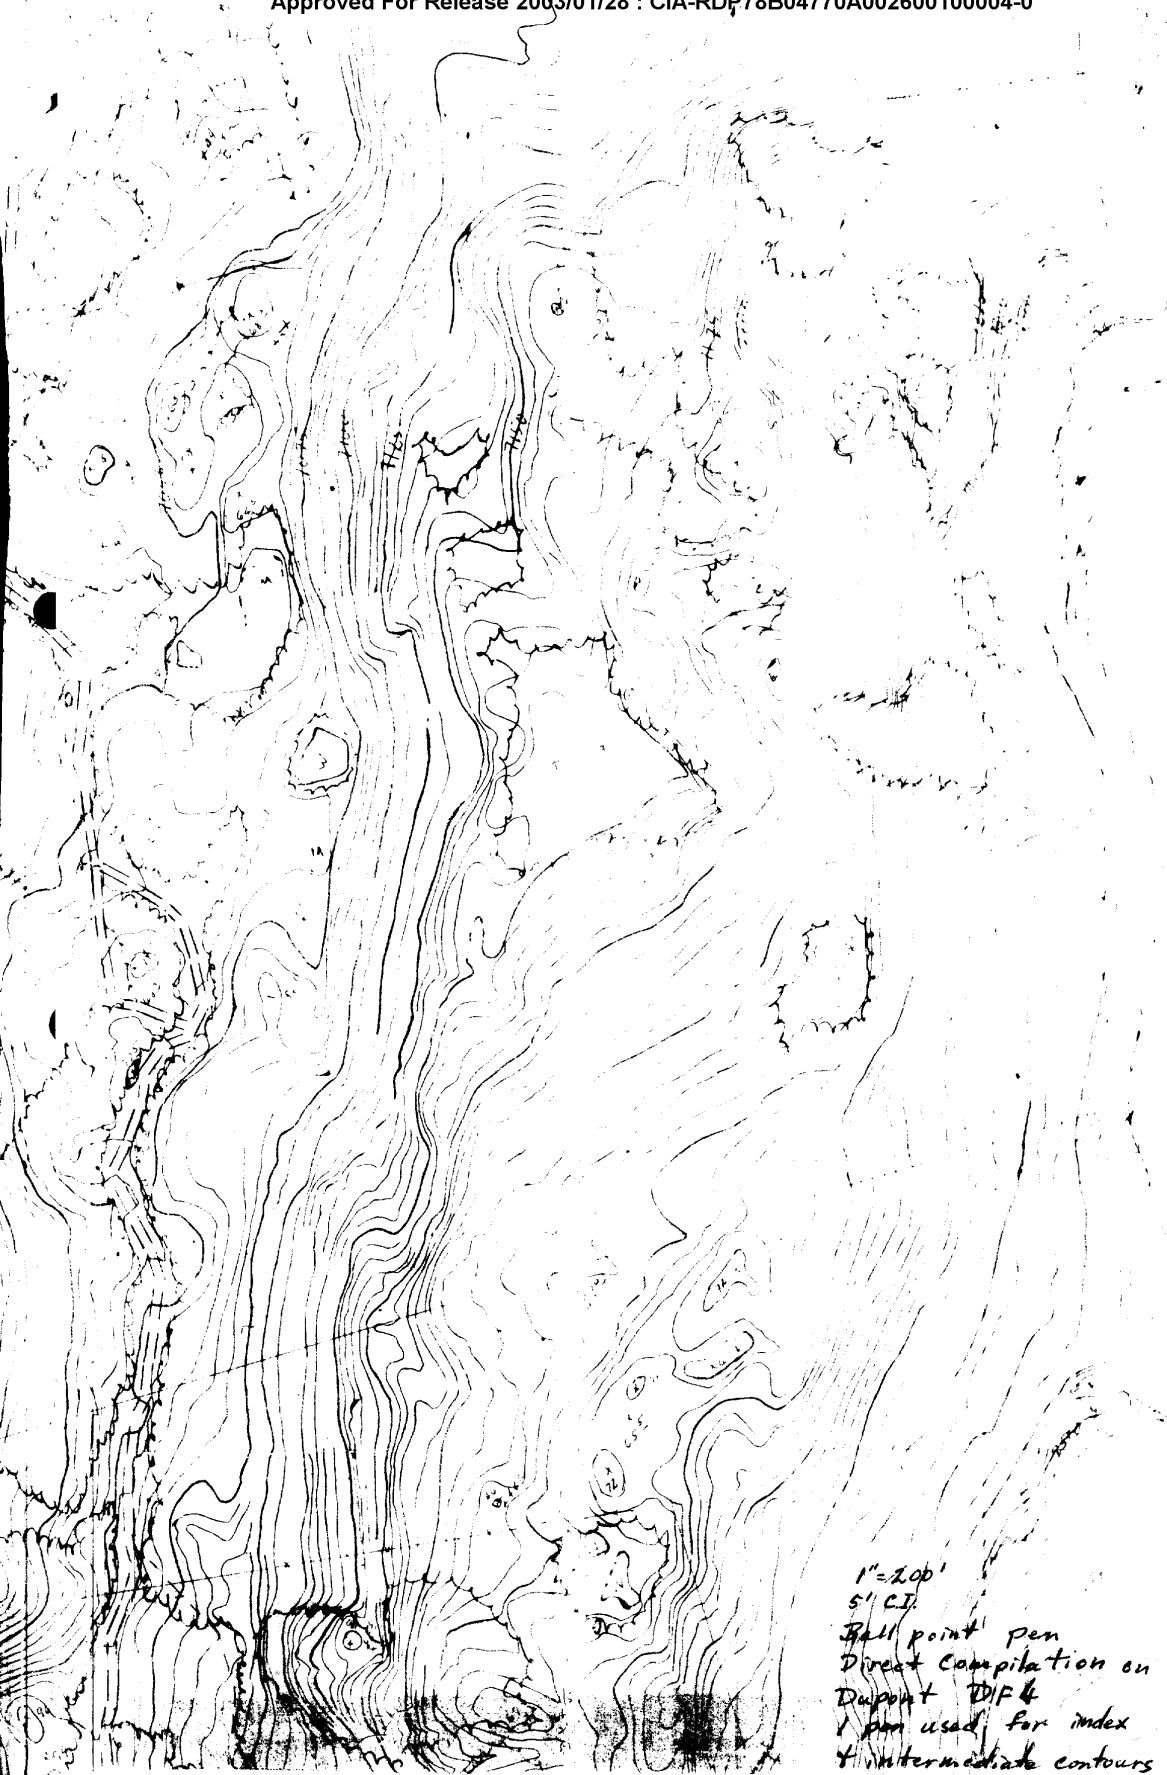

While working with the USGS in Denver, I developed ball point pen compilation. Later, while I was with [redacted] I introduced and converted [redacted] to ball point compilation. [redacted] and [redacted] organized from [redacted] work force, continue to use ball point pens for compilation. [redacted] [redacted] also compile with ball point pens.

The pens we use were developed, for me, to be used in mapping and drafting. If the C.I.A. is interested in ball point compilation, I can direct them to the manufacturer. The pen manufacturer has the support products necessary to make ball point compilation and drafting a success. [redacted]

[redacted] can give you first hand information on ball point compilation. [redacted] can also give you information.

I believe that ball point compilation and drafting would be a big asset to the Central Intelligence Agency.

Sincerely,

1"=200'
5' C.I.
